# Gynecological and Oncological Diseases in the Aged

### Message from the Guest Editors

Gynecological and oncological diseases in older women are a growing challenge in the 21st century, considering the aging population, delayed diagnosis of diseases, and limited treatment options. Ovarian cancer, endometrial cancer, or cervical cancer are among the most common gynecological cancers, the risk of which increases with age. It is estimated that over 50% of gynecological cancer cases occur in women over 65, and in women over 75, the risk of ovarian cancer is up to four times higher than in younger patients. In addition, gynecological diseases in older women are a significant health problem because they often remain undiagnosed or downplayed. Hormonal changes or comorbidities increase the risk of both benign and malignant diseases of the reproductive system. Therefore, we would like to draw attention to the lack of an interdisciplinary approach to treatment in older women, which would consider both oncological and gynecological needs as well as the general health of the patient.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.
