Emerging Trends in Head and Neck Surgery

Message from the Guest Editors

Head and neck surgery encompasses a broad range of surgical procedures addressing pathologies in the head and neck region, including benign and malignant tumors, congenital abnormalities, trauma, infections, and functional disorders. This Special Issue will focus on recent advances in imaging and endoscopic technologies, minimally invasive surgical approaches, personalized therapeutic strategies, innovations in reconstructive techniques, and the application of artificial intelligence in the diagnosis and treatment planning of head and neck pathologies. All research aiming to improve the diagnosis and clinical management of pathologies involving the thyroid, parathyroid, salivary glands, larynx, pharynx, oral cavity, nasal cavity, and paranasal sinuses will be considered for publication. We particularly welcome interdisciplinary contributions that reflect the collaborative nature of modern head and neck surgical care, involving otolaryngologists, radiologists, oncologists, and reconstructive surgeons. We invite authors to contribute to this Special Issue by sharing their clinical experience with cutting-edge approaches in head and neck surgery.

Guest Editors

Dr. Filippo Carta

Prof. Dr. Roberto Puxeddu

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
