

## Special Issue

# Traumatic Brain Injury and Neurointensive Care in Intensive Care

### Message from the Guest Editor

Traumatic brain injury (TBI) affects millions of individuals around the world every year and constitutes one of the leading causes of morbidity, disability and mortality for patients of all ages. It may result in a temporary or permanent impairment. The economic impact is potentially devastating: over USD 80 billion in the US alone according to the most recent CDC data. The aim of our Special Issue is to help health-care workers in the emergency department and intensive care unit to promptly recognize and manage patients with TBI (epidemiology, symptoms, signs, evolution, complication, outcomes, differential diagnosis, guidelines and future directions, classification, updates, monitoring). Case reports, research works, reviews, and observational and experimental studies are all accepted.

---

### Guest Editor

Dr. Filippo Manelli  
Emergency Department, ASST-Valcamonica, Esine, Brescia, Italy
