

## Special Issue

# Recent Advances in Autoimmune Rheumatic Diseases: 2nd Edition

### Message from the Guest Editor

Autoimmune rheumatic diseases are the leading cause of disability worldwide, with major financial and social consequences for all societies. The number of people suffering from autoimmune rheumatic diseases is increasing, especially in more economically developed countries. Autoimmune rheumatic diseases are a group of diseases characterised by heterogeneous clinical, laboratory and immunological manifestations. The pathogenesis of autoimmune rheumatic diseases is not fully understood, but recent research recognises that the pathogenesis of autoimmune rheumatic diseases is multifactorial. This encourages patient-centered collaboration between clinicians and researchers. This Special Issue focuses on the latest advances in autoimmune rheumatic diseases, with the hope that it will significantly contribute to clinical practice, improve public health, and share up-to-date information on the latest advances in autoimmune rheumatic diseases. We kindly invite you to submit your original research, review articles and case reports for this Special Issue.
