

## Special Issue

# Advances in Acute Myocardial Infarction

### Message from the Guest Editors

Despite the progress of modern medicine in prevention, diagnosis, and treatment, acute myocardial infarction is still the most common single cause of death in developed countries. This Special Issue addresses the continuous development concerning clinical diagnosis and treatment of acute myocardial infarction, as well as the establishment and validation of a prediction model for the nonrecovery of left ventricular ejection fraction in acute myocardial infarction and predictors of recurrent acute myocardial infarction despite successful percutaneous coronary intervention. You are invited to submit your manuscript to this Special Issue which aims to offer a complex and current overview of the existent new research topics related to acute myocardial infarction, expanding the current knowledge and adding important insights related to the management of patients with acute myocardial infarction to contribute to the continuous development in the dentistry field.
