Management of Patients with Rare Skin Diseases: Physiology, Pathogenesis and Treatment

Message from the Guest Editor

Although skin diseases are not serious, social and personal economic losses due to skin diseases are considerable. Many studies are being conducted to find the cause of skin diseases, including atopic dermatitis, psoriasis, and vitiligo, and to find a treatment method for them. Extensive research is being conducted on common skin diseases, as well as rare skin diseases. As medical research technologies, including omics and next-generation sequencing, are used in many research fields, research should be carried out in rare skin diseases as well. Through this, strategies and treatment methods for skin diseases can be found. This Special Issue aims to discuss the causes, treatment strategies, alternative treatment methods, and biomarkers for rare skin diseases.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
