Prophylaxis, Diagnosis, and Treatment Strategies of Gastric Cancer

Message from the Guest Editors

Gastric cancer (GC) is a malignancy that is both aggressive and diverse. It is one of the most prevalent cancers in the world and a significant global health concern owing to the fact that it has a high death rate and poor prognosis. There are two types of early screening for stomach cancer: mass screening, which is used on large populations, and opportunistic screening, which is used on people who are at risk.

Endoscopy and imaging are diagnostic methods that are utilized for the qualitative localization and staging of gastric cancer. These tools are considered to be the fundamental diagnostic tools for gastric cancer.

Treatment using endoscopic techniques, including endoscopic mucosal resection (EMR) and endoscopic submucosal dissection (ESD), is the method of choice for patients with in situ stomach. Open or laparoscopic surgery should be conducted on individuals who have localized cancer with curative intention. We are looking forward to receiving articles on subjects related to the diagnosis, treatment, and prevention of stomach cancer for this Special Issue.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief
