

Special Issue

From Conception to Birth: Embryonic Development and Disease

Message from the Guest Editors

The intricate processes that occur during embryonic development are vital for the formation and functioning of organs, tissues, and systems in the human body. Any disruptions during this period can have lasting effects on an individual's health. Understanding these events is crucial not only for exploring the origins of life but also for gaining insights into various diseases and conditions that may emerge later in adulthood. This Special Issue delves into the timeline of fetal development, examining aspects of embryonic growth and its connection to health. Researchers are encouraged to submit articles exploring organogenesis, cell differentiation, genetic regulation, environmental influences, reproduction, sex determination, pregnancy, congenital anomalies, and the physiological basis of diseases. Studying this area may reveal links between early life events and disease onset, potentially informing new approaches to address health issues.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
