

## Special Issue

# Celiac Disease and Non-celiac Gluten Sensitivity

### Message from the Guest Editor

Celiac disease (CD) is a gluten-induced immune-mediated enteropathy, characterized by the presence of specific serum autoantibodies and genetic markers. CD is an autoimmune systemic disease.

Non-Celiac gluten sensitivity (NCGS) is diagnosed in individuals who do not have CD or wheat allergy (WA), but who have intestinal and/or extraintestinal symptoms related to ingestion of gluten-containing grains, with symptomatic improvement on their withdrawal. The clinical variability and the lack of validated biomarkers for NCGS, make establishing the prevalence, reaching a diagnosis, and further study of this condition difficult.

Nevertheless, Clinicians cannot distinguish between Celiac disease and Non-Celiac gluten sensitivity by symptoms. Therefore, screening for CD must occur before a gluten-free diet (GFD) is implemented.

It is useful to recall that the prevalence of gluten-related disorders is rising, and that many individuals are empirically trying a GFD, for a variety of signs and symptoms.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.
