Ophthalmology, Environment, and Lifestyle: New Pathways in Diagnosis and Treatment

Message from the Guest Editors

Scientific evidence is continuing to emerge highlighting the impact of the environment and lifestyle on overall health, including the visual system. For example, during and after the COVID-19 pandemic, natural light was recognized as a key factor in myopia progression, while excessive screen use was linked to dry eye. Diet and nutrition remain a topic of debate, with challenges in separating science from myth. Meanwhile, technological advancements such as artificial intelligence are transforming diagnostics and treatment. From early life stages to aging populations, environmental and lifestyle factors shape ocular health, influencing risks for preventable blindness. These factors can act as protective or risk elements for various visual conditions. We invite the scientific community to contribute original research, narrative reviews, and systematic reviews focusing on epidemiology, diagnostics, and treatment and exploring the environment–lifestyle–vision nexus.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
