Clinical Profile and Treatment Response of Patients with Ocular Inflammation

Message from the Guest Editors

Ocular inflammations involve different parts of the eyes, with difficult early first diagnosis and treatment not being defined in all cases. Etiologic investigations allow for the epidemiology of ocular inflammation, according to whether the infection is of immunological origin or indicative of neoplastic masquerade syndrome. Most cases need a multidisciplinary approach. It is important to hasten the diagnosis of ocular inflammation because its development into more severe forms is associated with a poor functional prognosis, bad visual outcomes, and severe complications despite treatment. The aim of this Special Issue is to invite skilled colleagues to identify the clinical features of and treatments for patients with ocular inflammation. We welcome cutting-edge papers that will provide us with useful recommendations for the diagnosis and treatment of ocular inflammation. We are soliciting original papers, brief reports, and reviews.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
