Cardiac Rehabilitation in Patients With Heart Failure: New Perspectives in Exercise Training

Message from the Guest Editors

Heart failure (HF) is a distressing condition and is a leading cause of morbidity, affecting ~2% of the adult population in industrialized countries. HF can be defined as 'a complex clinical syndrome with typical symptoms that can occur at rest or during effort'. HF is characterized by objective evidence of an underlying structural abnormality or cardiac dysfunction that impairs the ability of the ventricle to fill with or eject blood. In recent years, new evidence has suggested that exercise-based rehabilitation programs have beneficial effects for patients with HF, and thus, supervised exercise programs are routinely recommended for all HF patients as a fundamental part of their non-pharmacological management, as they are considered safe and to also reduce HF-related hospitalization, comorbidities, and mortality rates in these patients. Exercise-based rehabilitation is known to improve quality of life and functional capacity for these patients. Evidence for the benefits of cardiac rehabilitation in heart failure patients is such that its systematic realization is recommended by international cardiological societies with the higher level of evidence.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
