

## Special Issue

# Gastrointestinal and Inflammatory Disorders: Current and Future Directions

### Message from the Guest Editors

In recent years, we have witnessed breakthroughs in several gastroenterological diseases which have drastically improved our understanding of disease pathogenesis, risk factors, diagnosis, predictors of outcome, and response to treatment, contributing to improved patient management and outcomes. Gastrointestinal diseases such as inflammatory bowel disease (IBD), pancreatitis, cholangitis, pseudomembranous colitis, diverticulitis, and general helicobacter-related diseases are the focus of research to better explore the above-mentioned targets. The aim of this Special Issue is to offer an opportunity to researchers to publish outstanding manuscripts focusing on general gastrointestinal and inflammatory disorders. Priority will be given to high-quality original articles, but well-designed, systematic reviews (with or without metaanalysis) and narrative reviews addressing the latest updated insights on a specific topic will definitely be welcomed.
