

## Special Issue

# Current Management of Hip Fracture

### Message from the Guest Editor

The purpose of this Special Issue is to discuss the evidence of the current management of hip fractures. Therefore, the scope is not tailored to only surgical strategies and the choice of implant, but should also focus on the whole process of treating patients after suffering a hip fracture. This includes epidemiology, process optimization, orthogeriatric co-management concepts, geriatric fracture centers, and secondary prevention of fractures. Even the analyses of the socioeconomic consequences are of interest. Moreover, the type of fracture is not limited to femoral neck fractures, but also included trochanteric and subtrochanteric femur fractures, proximal periprosthetic and periimplant fractures, and acetabular fractures.
