Immunologic Checkpoint Molecules and Their Role in Reproduction and Cancer

Message from the Guest Editor

Immune checkpoint molecules, such as FasL/Fas, TIM-3/Gal-9, and PD-1/PD-L1, are regulators of immune responses of the fetus that prevent its rejection by the maternal immune system. On the other hand, checkpoint inhibitors are among the most promising therapeutic approaches for the treatment of a variety of cancers, leading to strong immune responses against tumor cells by blocking PD1/PD-L1 or TIM-3/Gal-9. In addition, interaction between the receptor Fas (CD95) and Fas Ligand (FasL, CD178) can efficiently induce apoptosis and is critical for the maintenance of immunological tolerance. Therefore, this Special Issue deals with a variety immunologic checkpoint molecules and their functions in reproductive immunology and cancer biology.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
