

Topical Collection

Interventional Oncology

Message from the Collection Editors

Interventional oncology (IO) is a medical specialty offering innovative diagnostic and therapeutic minimally invasive procedures in the oncologic field, but also allowing the management of all issues related to cancer. One critical aspect of IO is that the concept unifying these procedures remains imaging guidance.

The purpose of this topical collection is to present these image-guided treatments as alternatives to conservative therapies or surgery and to promote basic and clinical research on this topic as these techniques can serve as attractive alternatives to other options, with a clear effect on quality of life.

We encourage authors to submit both preclinical and clinical studies in the field. Clinical studies may include systematic reviews, retrospective studies, case reports, and prospective studies emphasizing the role and need for IO. We remain at your disposal for additional questions.
