Recent Advances in Allergy and Clinical Immunology

Message from the Guest Editor

Although allergic and atopic diseases have reached epidemic proportions in recent decades in industrialized countries, the reasons for such an increase are still unclear. Numerous factors have been recognized (such as exposomes) that can modify the immune response and lead to epigenetic modifications of sensitive individuals. Moreover, the new finding of immunological mechanisms of allergic sensitization and phenotype expression, progression of disease and development of tolerance to allergens will facilitate the development of new preventive and therapeutic perspectives. In recent years, diagnostic accuracy has increased, new biomarkers have been discovered and therapeutic efficacy has been improved, opening up the possibility of the implementation of personalized and precise medicine in clinical practice. However, the development of innovative and highly effective biological therapies and allergen-specific immunotherapy changed the therapeutic scene in the treatment of allergic diseases.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
