Dentistry: A Multidisciplinary Approach

Message from the Guest Editors

In the last few years, dentistry has increased its aspects of research and its cooperation with other disciplines. This Special Issue focuses on the most recent and significant innovations in the dental field, focusing attention on the multidisciplinary, technological, and research aspects as well as how they can be involved in oral health and in clinical dentistry practice. The applications of new biomaterials and techniques can lead to a significant advance in all of the main dental branches, such as restorative dentistry, prosthodontics, oral surgery, implantology, pediatric dentistry, orthodontics, and temporomandibular disorder patients. Authors conducting studies on these themes are welcome to submit original research articles, reviews, short communications, case series, and case reports.
