

## Special Issue

# Youth Mental Health after COVID-19 Pandemic: Prevention, Innovation and Treatment Projects in Mental Health Services

### Message from the Guest Editors

The journal *Medicina* launched a Special Issue titled "Youth Mental Health after COVID-19 Pandemic: Prevention, Innovation and Treatment Projects in Mental Health Services". Although physical health is understandably the priority during a pandemic, the impact of the COVID-19 pandemic and subsequent measures to protect mental health should be a major concern, particularly for adolescents, as compared to adults, the mental health of young people is often disproportionately affected by disasters. Due to dramatic and sudden changes in their lives during the pandemic, thousands of teenagers around the world could still be at risk for psychopathological disorders, creating a mental health "pandemic" scenario. We believe they deserve an inclusive response in terms of global health measures to avert potentially serious and long-lasting effects in terms of marginalization, stigma and psychopathological developments. The aim of this Special Issue is to receive new proposals, ideas and practices used or to be implemented for the future in order to improve the mental health of current adolescents and young adults.
