Managing Cardiac Events in Congenital Heart Disease: Current and Future Approaches

Message from the Guest Editors

Over the past decades, due to significant advances in medical treatment, interventional and surgical techniques, survival for patients with congenital heart disease (CHD) has significantly increased, with about 90% of patients now reaching adulthood. Nevertheless, a large percentage of patients with severe CHD remain at high risk for premature death, mainly related to heart failure and arrhythmias. On the other hand, acquired cardiovascular risk factors and coronary artery disease are now emerging as a new important cause of comorbidity in this peculiar population. Last but not least, CHD patients often desire to live like their peers, and pregnancy and sexual well-being, with their relative complications, are part of that. This Special Issue aims to describe current and future approaches in managing cardiovascular events in adult patients with CHD.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
