Modern Radiotherapy in Current Oncology

Message from the Guest Editors

External beam radiation therapy has been commonly used as a curative modality in recent decades, whereas it had been used mostly for palliative or adjuvant purposes in the past. In current clinical practice, radiation therapy plays a curative role in the treatment of various cancers. The application of stereotactic radiation therapy for localized malignancies has begun to serve as a novel curative and non-invasive option of treatment. Modern radiotherapies, including intensity-modulated radiotherapy or particle therapy, have enabled treating diseases that were previously contraindicated for radiotherapy by significantly reducing treatment toxicities. This Special Issue covers all subjects related to the application of external beam radiation therapy in modern clinical practice. Research on treatment efficacy and side effects of stereotactic body radiotherapy, intensity-modulated radiotherapy or particle therapy are welcomed. Meta-analyses related to the above topics will also be considered for publication. Studies on surgical treatment or chemotherapy applied with radiation therapy are also welcomed.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
