

## Special Issue

# Novel Innovations in Diabetes Mellitus Prevention, Screening and Management

### Message from the Guest Editors

As the number of people living with diabetes mellitus (DM) continues to rise, early detection and preventive strategies have become essential in reducing its impact on public health. This Special Issue (SI) will compile significant research and innovative approaches aimed at addressing the global DM epidemic. We welcome original research, reviews, and perspective articles on all aspects related to DM screening and prevention. Relevant topics include, but are not limited to, advancements in screening technologies such as novel biomarkers, genetic profiling, and non-invasive methods. Additionally, studies on the role of artificial intelligence and machine learning in enhancing screening efficiency and personalized risk assessment are highly encouraged. We also invite contributions focusing on preventive strategies, encompassing lifestyle interventions, dietary modifications, and community-based programs. Articles addressing the importance of public health policies, educational campaigns, and their effectiveness in raising awareness and promoting healthy behaviors are particularly welcome.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.
