Advancement in Oropharyngeal Squamous Cell Carcinoma Diagnosis and Treatment

Message from the Guest Editor

Background and history of this topic: Oropharyngeal squamous cell carcinoma (OPSCC) has reported a constantly increasing incidence in recent years. OPSCC is related to environmental and oncogenic human papillomavirus (HPV) cancer risk factors. Hence, it is possible to identify two main OPSCC patient groups: one induced by environmental cancer risk factors (HPV-negative OPSCC) and the other induced by HPV infection (HPV-positive OPSCC). These two groups of OPSCC patients differ in terms of molecular and genetic profiles, socioeconomic demographics, clinical presentation, treatment options and prognoses in terms of overall survival.

Aim and scope of the Special Issue: The objective of this Special Issue is to provide an up-to-date analysis on the diagnostic workup, clinical presentation and main treatment options of patients affected by OPSCC. The kinds of papers we are soliciting: narrative reviews, case reports or series as well as retrospective analyses.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
