

## Special Issue

# Contemporary Management and Outcomes of Orthopedic Fractures

### Message from the Guest Editors

Orthopedic fractures remain a major global health challenge, affecting millions of individuals of all ages. Advances in diagnostic imaging, surgical techniques, implant technology, and perioperative care have significantly contributed to improved clinical and functional outcomes.

In addition to traumatic fractures, aging societies are experiencing a rapidly increasing incidence of osteoporotic fractures. Their rising incidence underscores the urgent need for improved prevention strategies, early diagnosis, and more effective surgical and non-surgical management.

Furthermore, the growing number of total joint arthroplasties has led to an increasing incidence of periprosthetic fractures. These complex injuries require meticulous preoperative planning and individualized treatment approaches.

This Special Issue aims to provide a comprehensive overview of contemporary approaches to the management of orthopedic fractures, encompassing both operative and non-operative strategies.

We warmly invite the submission of original, high-quality research articles, systematic reviews, and meta-analyses addressing the prevention and modern treatment of various fracture types.

---

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.
