

## Special Issue

# Recent Clinical and Basic Research on Endocrine Surgery

### Message from the Guest Editor

Endocrine surgery is the field of surgery for thyroid, parathyroid, and adrenal diseases, and the role of surgical treatment is the most important aspect of patients' care. In particular, endocrine surgery is an area where advanced surgical techniques are used, such as the endoscopic and robotic approach with various minimally invasive techniques. Furthermore, endocrine surgeons are leaders in basic research, including cancer genomics and biomedical informatics. In this Special Issue, we want to share the up-to-date experiences of clinical care and basic research conducted by endocrine surgeons from around the world. All topics are suitable, and our aim is to facilitate free sharing and interaction between various endocrine surgeons from around the world.
