Current Trends in Regenerative Medicine: Less is More Effective

Message from the Guest Editor

In recent years, bone regeneration has been one of the trend topics in dental literature as it encompasses an increasingly wide range of concepts. The clinical demand for ever-more functional and esthetically pleasing results has challenged researchers to reach new standards. Different conceptual gaps are yet to be filled—the interaction of surface topographical parameters upon attachment, morphology, and proliferation, and the differentiation of cells, are tricky subjects that demand attention. There are some major conditions to regeneration: appropriate wound size, rich blood supply, oxygenation, nutrition, angiogenesis, space maintenance, clot stability, and eventual implant stability. There is a growing feeling in regenerative medicine that “less is more”, with different authors deciding to treat hard and soft tissue regeneration as simply as possible. For example, extractive alveolus is a composite wound containing connective tissue, mesenchymal cells, blood, and lymphatic vessels: in the last few years, the granulation tissue has been also addressed as a potential source of stem cells for different oral regenerative procedures.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
