

Special Issue

Pulmonary Hypertension: Symptoms, Diagnosis and Management

Message from the Guest Editors

This Special Issue is focused on the most recent data covering the various aspects of pulmonary hypertension, including clinical presentation, diagnosis confirmation, and management. Multiple etiologies cause elevated blood pressure in pulmonary arteries. Although several approved and recently introduced treatment possibilities exist, including the medications mostly for Group I (pulmonary arterial hypertension) and Group IV (pulmonary hypertension associated with pulmonary artery obstructions), the prognosis is poor. After the closure of small pulmonary arteries, the patients die due to the progressing failure of the right ventricle. There is an unmet need for a better understanding of this pathology for better management and patient care. The aim and scope of this Special Issue are to help and encourage scientists working in this area to publish their data.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
