# Updates on Metastatic Renal Cell Carcinoma

### Message from the Guest Editor

Renal cell carcinoma (RCC) accounts for the vast majority of malignancies of the kidney, and its incidence is constantly increasing in developed countries.

While localized disease is associated with very good outcomes, patients with metastatic RCC (mRCC) face a worse prognosis.

Certainly, there are still an exciting number of innovations yet to come, as many clinical trials are currently ongoing. Moreover, apart from the treatment options for patients with clear-cell RCC, there is also a promising advancement in understanding and treating the other, less common subtypes of RCC grouped together as non-ccRCC. Along with novel therapies, there has also been a significant improvement in understanding the biology of RCC. New predictive and prognostic factors are being developed, the role of the immune system is becoming better understood, and new perspectives for targeted therapies are continuously arising.

Taken together, all the developments in recent years and the perspectives for the future make for an exciting landscape of the modern approach to RCC.

We welcome the submission of original research papers and reviews.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.
