

## Special Issue

# Advances in the Management of Severe Asthma: From Phenotyping to Personalized Treatment

### Message from the Guest Editors

Asthma is a common, chronic airway disease, affecting 1-18% of the population in different countries. The management of severe asthma can pose a significant burden on healthcare systems.

In recent years, a better understanding of the pathogenic pathways and the rise of biologic therapy in the field of severe asthma have marked significant progress in the management of this condition.

Clinical experience with these new therapeutic agents is still limited and there are many unanswered questions regarding long-term safety issues, duration of treatment, optimal frequency of administration, switching between different agents, modulation of inhaled medication.

Medicina is launching a Special Issue entitled "Advances in the Management of Severe Asthma: From Phenotyping to Personalized Treatment". The aim of this Special Issue is to foster both cutting-edge research reports and insights from clinical experience.

We are pleased to invite submissions of original articles reporting on basic and clinical research in severe asthma, as well as interesting case reports, perspectives, reviews, systematic reviews and meta-analyses.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.
