The Role of Arthroscopy in Modern Orthopedics

Message from the Guest Editor

Arthroscopy has become fundamental for modern orthopedic surgery, offering a minimally invasive approach that markedly reduces secondary soft tissue damage compared with open procedures. Arthroscopy also provides access to anatomically challenging regions where open approaches are limited, such as the coracoid process in the shoulder or deep-seated hip joint structures. Furthermore, it allows for the effective diagnosis and treatment of small joints, including the wrist and ankle, and is applicable in conditions such as carpal tunnel syndrome, cubital tunnel syndrome, and trigger finger, enabling delicate and precise intervention. In the shoulder region, arthroscopy can facilitate visualization and treatment in cases of thoracic outlet syndrome. This Special Issue aims to highlight the latest technological developments, clinical applications, and future directions of arthroscopy, emphasizing its transformative impact on patient care across diverse anatomical regions.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
