Advances in Pathogenesis and Treatment of Glomerulonephritis

Message from the Guest Editor

Glomerulonephritis is the main cause of rapid evolution towards chronic renal failure, in case of non-diagnosis and treatment. Glomerulonephritis can be primary or secondary to various systemic diseases, in particular vasculitis and connective tissue diseases. Its pathogenesis is therefore, in the majority of cases, immunological. In recent years, there has been progress on the pathogenetic knowledge of various glomerulonephritis: membranous nephropathy, IgA nephropathy, C3 glomerulonephritis and nephrotic syndrome. Further discoveries have occurred in the genetics of hereditary nephritis. This recent pathogenetic knowledge has led to the use of new therapeutic protocols, also making use of biological drugs, with excellent efficacy and few side effects. This Special Issue will deal with several aspects of prognostic risk factors, pathogenesis and treatment of glomerulonephritis.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Medicina* (ISSN: 1648-9144). *Medicina* is an open access, peer-reviewed scientific journal that publishes original articles, critical reviews, research notes, and short communications on medicine. The scientific community and the general public can access the content free of charge as soon as it is published.

Editor-in-Chief

Prof. Dr. Edgaras Stankevičius
Medical Academy, Lithuanian University of Health Sciences, Kaunas,
Lithuania

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)
