

## Special Issue

# Research on Dental Biomaterials and Equipment

### Message from the Guest Editor

Dental biomaterials play an important role in dentistry in the rehabilitation of injured or damaged enamel, dentin, pulp, periodontium, and bone. Although no dental biomaterial has been reported as having ideal properties to date, there have been numerous attempts by researchers around the world to develop one that is more advanced.

It is our pleasure to inform you that this Special Issue is open for submissions. Papers for this Special Issue of the journal will focus on recent research regarding dental biomaterials/equipment, though other emerging areas of applications in the fields of dentistry will also be considered. Of particular interest is the introduction of novel biomaterials/equipment applicable in clinical dentistry.

We sincerely hope this invitation will receive your favorable consideration. We are happy to answer your questions, and we look forward to hearing from you.

---
