Special Issue

Research Progress of Surgical Oncology

Message from the Guest Editor

As cancer and information regarding neoplastic process genesis continued to evolve in the last century, a similar process was reported in the field of cancer therapy, surgery remaining in a significant number of cases the cornerstone for achieving long-term survival.

Meanwhile, in the last decade, the concept of personalized medicine developed, increasing in this way the chances of improving long-term outcomes. The aim of this Special Issue is to focus on the most recently reported technologies in the field of surgical oncology which are expected to improve the oncological outcomes of these cases. Special attention will be paid to the field of gynecologic oncology and hepato-biliopancreatic surgery.
