

## Special Issue

# COVID-19-Associated Diseases: The Uncertainty of Diagnosis and Treatment

### Message from the Guest Editor

Since the eruption of severe acute respiratory syndrome coronavirus 2 (SARS- CoV-2) at the end of December 2019, healthcare systems around the globe and the scientific community have been facing significant challenges. One of the great challenges is the uncertainty in understanding the etiology, diagnosis, and managing the disease. This confusion negatively impacts both the patients and the healthcare providers. After a year in the pandemic, in this Special Issue of *Medicines*, we call on clinicians and scientists to consolidate their experiences in light of the available evidence and share their invaluable work with the scientific community to help as many patients as possible with our collective capabilities.
