# **Special Issue**

# Pathogenesis and Treatment of Chronic Pruritus

## Message from the Guest Editor

Chronic pruritus, defined as an itch persisting for more than six weeks, dramatically reduces quality of life. Chronic itch is associated with a variety of dermatologic, systemic, neurological, and psychological underlying etiologies. This Special Issue will compile original research and review articles on the pathogenesis and treatment of chronic pruritus. Manuscripts should deal with but are not limited to the list of keywords below:

- Chronic pruritus
- Itch
- Refractory pruritus
- Prurigo nodularis
- Atopic dermatitis
- Idiopathic chronic pruritus

## **About the Journal**

## Message from the Editor-in-Chief

Medicines (ISSN 2305-6320) is an international, peer-reviewed, and open-access journal aimed at disseminating cutting-edge research in the field of drug discovery and clinical application. It publishes original research papers, research communications, letters, and systematic reviews. The contents of the papers handled are manufacture of new drugs, exploration of drug-delivery systems, therapeutic effect, action mechanism, and their modulation by intrinsic and extrinsic factors. We look forward to handling your contributions in the very near future.

## Editor-in-Chief

Prof. Dr. Hiroshi Sakagami

Meikai University Research Institute of Odontology (M-RIO), 1-1 Keyakidai, Sakado, Saitama 350-0283, Japan

## **Author Benefits**

## **Open Access:**

free for readers, with article processing charges (APC) paid by authors or their institutions.

## **High Visibility:**

indexed within PubMed, PMC, CAPlus / SciFinder, and other databases.

## **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 45 days after submission; acceptance to publication is undertaken in 5.7 days (median values for papers published in this journal in the first half of 2025).
