

Special Issue

Stem Cells in Eye Research and Ophthalmology—Current Advances and Future Directions

Message from the Guest Editors

Understanding of stem cells and their roles in ocular physiology, cellular interaction, and tissue repair in the eye continue to intrigue researchers. Concomitantly, clinical research using stem cells in ophthalmology is establishing stem cell therapy as an increasingly important means of ameliorating ophthalmic disease and vision loss. This Special Issue will offer basic, preclinical, and clinical articles for the readers' review and to demonstrate that stem cells and their products such as exosomes and extracellular vesicles offer unmet research opportunities and new hope to patients suffering from blindness.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Hiroshi Sakagami
Meikai University Research Institute of Odontology (M-RIO), 1-1
Keyakidai, Sakado, Saitama 350-0283, Japan

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within PubMed, PMC, CAPlus / SciFinder, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 45 days after submission; acceptance to publication is undertaken in 5.7 days (median values for papers published in this journal in the first half of 2025).
