

## Special Issue

# Worsening Renal Function in Acute Heart Failure

### Message from the Guest Editor

In a clinical setting of acute heart failure (AHF), worsening renal function (WRF) is frequently experienced after the initiation of AHF treatment. However, the impact of WRF on AHF outcomes remains undetermined. Historically, diuretic-induced WRF during hospitalization has been recognized as a poor prognostic factor. On the other hand, residual congestion, which might be a result of cautious treatment to avoid WRF, has also been recognized as a poor prognostic factor. This discrepancy and the dispute over WRF cause confusion in clinical practice. The aim of this Special Issue is to update current knowledge on WRF in AHF treatment.

#### Author Benefits

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, MEDLINE, CAPus / SciFinder, and other databases.

##### Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 24.3 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
