

Special Issue

Bone Metabolic Disease: Diagnosis, Prevention and Therapy

Message from the Guest Editor

Bones plays an endocrine function, secreting bone-derived hormones that exert an effect on the whole body metabolism. Metabolic bone diseases are disorders in bone strength usually caused by imbalances in minerals, vitamin D and other endocrine disorders including diabetes or thyroid disease. While our understanding of bone metabolism has increased in the last years, there are still gaps in our knowledge of the pathophysiology, diagnosis and therapy of bone metabolic disorders and their implication for the whole-body metabolism. This Special Issue of Medical Sciences invites researchers to contribute with original research articles and reviews in all the aspects of bone metabolism. Topics of interest include but are not limited to: (1) basic studies in bone metabolism and metabolic diseases (2) the physiopathology of metabolic bone diseases (3) preclinical treatments and diagnosis tools for bone metabolic diseases (4) other emerging areas in the bone research fields including new models for preclinical trials.

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Antoni Torres

1. Institut D investigacions August Pi I Sunyer (IDIBAPS), Department of Pulmonology, Hospital Clinic de Barcelona, Universidad de Barcelona, 08036 Barcelona, Spain

2. Centro de Investigación Biomédica en Red en Enfermedades Respiratorias (CIBERES), Instituto de Salud Carlos III, 28029 Madrid, Spain

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), PubMed, PMC, MEDLINE, CAPus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Medicine, General and Internal) / CiteScore - Q1 (General Medicine)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 24.3 days after submission; acceptance to publication is undertaken in 2.9 days (median values for papers published in this journal in the first half of 2025).
