Membrane Processes in a Circular Economy: Opportunities and Challenges

Guest Editors:

Dr. Anna Kowalik-Klimczak

Łukasiewicz Research Network,
Institute for Sustainable
Technologies, 26-600 Radom,
Poland

Prof. Dr. Maciej Szwałt

Faculty of Chemical and Process
Engineering, Warsaw University
of Technology, 00-645 Warsaw,
Poland

Prof. Dr. Marzena Smol

Mineral and Energy Economy
Research Institute, Polish
Academy of Sciences, 31-261
Cracow, Poland

Deadline for manuscript
submissions:

closed (20 November 2024)

Message from the Guest Editors

Sustainable resource management necessitates the development of modern technologies to enable the management of treated sewage (recovery and recycling of water, closure of water cycles, etc.); reduction in the loss of nutrients and environmental pollution; energy recovery and energy-saving technological processes; and the effective management of waste biomass. Such activities constitute the basis for eco-development, enabling the transformation towards a circular economy in line with global trends.

This Special Issue aims to review the latest achievements in the field of membrane technological solutions, enabling the minimization of industrial pollutant emissions into the natural environment through highly effective wastewater treatment and post-filtration waste management.

In this Special Issue, original research articles and reviews are welcome. Research areas may include (but are not limited to) the following topics:

- circular economy;
- water reclamation;
- nutrients recovery;
- wastewater treatment;
- membrane processes;
- new types of membranes;
- membrane manufacturing;
- membrane fouling control.

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375).

Membranes is an international, peer-reviewed open access journal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Polymer Science) / CiteScore - Q1 (Chemical Engineering (miscellaneous))
