Deadline for manuscript submissions:

closed (30 November 2021)

Message from the Guest Editor

In recent years, a number of alternative chromatography supports have been proposed to recovery/purification of Bioproducts. This was triggered by the limitations encountered with conventional beaded adsorbents, particularly when dealing with an expanded portfolio of novel biological entities. Examples of non-traditional supports are membrane-based adsorbents, macro-porous structures, fibrous materials, and monoliths. This issue explores the performance and applications of alternative bioproduct adsorbents.

Keywords

- Chromatography
- Adsorbents, alternative
- Cryogels
- Monoliths
- Membranes
- Fibers
- Bioproducts, capture/recovery/purification/fractionation

an Open Access Journal by MDPI

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375).

Membranes is an international, peer-reviewed open access journal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Polymer Science*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
