Fouling in Liquid Separation Membrane Technologies

Guest Editors:

Dr. Marco Stoller

Department of Chemical
Engineering, University Sapienza
of Rome, Via Eudossiana 18,
Rome, Italy

Dr. Javier Miguel Ochando- Pulido

Department of Chemical
Engineering, University of
Granada, 18071 Granada, Spain

Deadline for manuscript
submissions:

closed (30 September 2018)

Message from the Guest Editors

Dear Colleagues,

This Special Issue encourages the submission of general works on membrane fouling, and, in particular:

- Case studies on membrane systems characterized by a constant or sudden permeate flux reduction as a function of time
- Review of historical process data from membrane systems that exhibit a reduction of performances as a function of time due to fouling
- Studies of fouling formation and growth on membrane surfaces
- Development of statistic and/or mathematical models of the ongoing fouling on membrane systems as a function of time
- Critical flux, threshold flux, sustainable flux, boundary flux studies
- Advanced control systems for membrane processes for fouling formation inhibition
- Membrane surface modification studies to inhibit fouling formation
- Biofouling
- Development of new devices, equipment, modules or process design for fouling inhibition purposes
- Cleaning and/or washing procedures to eliminate fouling formation on membranes

I hope that you might join this opportunity for publication of your work.

Special Issue

an Open Access Journal by MDPI

Editor-in-Chief

Prof. Dr. Spas D. Kolev

School of Chemistry, The
University of Melbourne,
Melbourne, VIC 3010, Australia

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375).

Membranes is an international, peer-reviewed open access journal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Chemistry, Physical*) / CiteScore - Q2 (*Chemical Engineering (miscellaneous)*)
