Deadline for manuscript submissions:
20 January 2021

Message from the Guest Editor

Dear Colleagues,

Different membrane desalination (MD) processes under thermal-based and pressure-driven methods have been implemented using solar energy resources with a corrosion-free heat exchanger. The combination of solar thermal and PV energy (or thermal/PV hybrid) with MD has proven technically feasible and widely recognized in saline water desalination. Technological assessments have been examined in the nexus of technical feasibility and economic benefits with the aim to create integrated systems of a solar-assisted thermal-driven transport of vapor through a porous hydrophobic membrane. The advances and prospects of using emerging membrane desalination modules on device performance are discussed. This Special Issue is dedicated to providing a forum of comprehensive coverage on the state-of-the-art and study of advanced applications in MD with solar energy resources and delivering suitable large-scale design MD processes in various industrial applications. Both original research articles and reviews are welcomed. All submissions for the Special Issue will go through the normal peer-review process.

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375).

Membranes is an international, peer-reviewed open accessjournal of membrane technology published monthly onlineby MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding oftransport processes in all types of membranes are alsowelcome. The scientific community and the general publichave unlimited and free access to the content as soon as itis published. We would be pleased to welcome you as oneof our authors.

Author Benefits

Open Access:—free for readers, with article processing charges (APC) paid by authors or their institutions.
High Visibility: Indexed by the Science Citation Index Expanded (SCIE-Web of Science), Scopus (CiteScore: 3.5), Ei Compendex, SciFinder (CAS), Polymer Library and other databases. Citations available in PubMed, full-text archived in PubMed Central.
Rapid Publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 11.5 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2020).
