

Special Issue

Advanced Membrane Technology on Desalination and Concentration

Message from the Guest Editor

This special issue focuses on desalination and concentration. In order to further expand the possibilities of membrane technology, this special issue targets desalination and concentration for any substance or ion. Furthermore, there are no restrictions on the types of membranes (RO, IEM, etc.), and the membrane technology combining different types of membranes is also within the scope of this special issue. **Keywords:**

- Membrane transport
- Desalination and/or Concentration
- Separation and/or Recovery
- Unit systems and/or Combined systems
- System design and/or System evaluation

About the Journal

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375). *Membranes* is an international, peer-reviewed open access journal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Spas D. Kolev

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Polymer Science) / CiteScore - Q1 (Chemical Engineering (miscellaneous))
