

Special Issue

Electrically Conductive Membranes

Message from the Guest Editor

Electrically conductive membranes have the potential to enable enhanced performance in controlling the flux, separation, permselectivity, antifouling, or controlled release properties via electrical stimulation. Therefore, they could be used in different applications to address various challenges. However, there is still a need to develop novel conductive-materials-based membrane system technologies and gain mechanistic and structural understanding. This Special Issue specifically focuses on Electrically Conductive Polymeric Membranes and their potential applications including water treatment, separations (including biological separation), food packaging, and biomedical applications. It expects to receive contributions in the form of original research papers and reviews. Topics may include but are not limited to novel conductive-polymeric-materials-based membrane development and characterization, composite membranes involving conductive graphene or carbon nanotubes, surface-modified conductive membranes, novel manufacturing techniques, electrical-stimuli-mediated separation or controlled release, and the economic feasibility of conductive polymeric membranes.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375). *Membranes* is an international, peer-reviewed open access journal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Spas D. Kolev
School of Chemistry, The University of Melbourne, Melbourne, VIC

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Polymer Science) / CiteScore - Q1 (Chemical Engineering (miscellaneous))
