Special Issue

Cellular Membranes Drug Permeability

Message from the Guest Editor

Membranes play a crucial role during the transition of substances from the surroundings into cells and vice versa. These complex structures therefore deserve our attention, especially today. A lot of advanced experimental methods have allowed a more detailed study of cell membranes, e.g., microscopy techniques. On the other hand, theoretical methods have also become available, such as bioinformatics disciplines, drug design methods, and statistics. This Special Issue on “Nanoscale Membrane Structure and Dynamics” of the journal *Membranes* is thus the starting point for a combination of experimental and theoretical methods of studying cell membranes at different levels. Authors from various areas of the natural sciences dealing with membranes are therefore welcome to submit their contributions.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375). *Membranes* is an international, peer-reviewed open accessjournal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Spas D. Kolev
School of Chemistry, The University of Melbourne, Melbourne, VIC 3010, Australia

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Polymer Science) / CiteScore - Q1 (Chemical Engineering (miscellaneous))
