

## Special Issue

# Materials for Membrane Separation and Selective Adsorption

### Message from the Guest Editor

This Special Issue on “Materials for Membrane Separation and Selective Adsorption” aims to present theoretical and experimental advances on material development that address key challenges in the area of membrane separation and adsorption. Topics include, but are not limited to:

- Novel materials development (e.g., graphene, metal-organic frameworks) for efficient membrane separation and adsorption
- Advanced techniques for fabricating asymmetric membranes, mixed matrix membranes or monolithic adsorbent, etc.
- Characterisation methods to reveal membrane microstructure (e.g., interfacial morphology of mixed matrix membranes)
- Relation between material structure and transport properties of membrane and porous materials
- Membrane applications in gas separation, desalination, water treatment etc.
- Developments in theoretical modelling of transport in nanoporous materials

## About the Journal

### Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375). *Membranes* is an international, peer-reviewed open access journal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Polymer Science) / CiteScore - Q1 (Chemical Engineering (miscellaneous))
