

Special Issue

Membranes for Environmental Applications 2020

Message from the Guest Editors

Membranes have important environmental applications ranging from water treatment to wastewater treatment and reuse, desalination, air filtration, etc. Various membrane-based processes have been involved, including reverse osmosis (RO), nanofiltration (NF), ultrafiltration (UF), microfiltration (MF), membrane bioreactor (MBR), membrane distillation (MD), forward osmosis (FO), membrane contactor, etc. These processes have been widely used for pollution control, resource recovery, and energy generation. They play a key role in the removal of pathogens, heavy metals, micropollutants, and other harmful contaminants. New membrane materials and structures have been developed to greatly enhance their permeability, selectivity, and stability in these applications. This Special Issue highlights the latest developments and future perspectives of various membrane-based environmental applications. Both reviews and original articles are welcome.

About the Journal

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375). *Membranes* is an international, peer-reviewed open access journal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Polymer Science) / CiteScore - Q1 (Chemical Engineering (miscellaneous))
