Membrane Distillation Process

Message from the Guest Editor

The water stress that we are experiencing in last years is pushing towards the development of new technologies for the purification and recovery of water. With respect to Reverse Osmosis (RO) that is limited by the osmotic pressure and sometimes shows low rejection values for elements like As(III) and Boron, Membrane Distillation (MD) is able to produce fresh water from high-concentrated streams and provides 100% theoretical rejections for all non-volatiles present into the aqueous feeds. Despite these advantages, MD is far from a significant application at industrial scale, due to some still pending issues concerning membranes and modules design and the specific thermal energy consumption. The aim of this Special Issue is to provide an overview of the last results obtained in the field for overcoming MD drawbacks and boosting its implementation at large scale. **Keywords**

- Membrane Distillation
- Water and Wastewater Treatment
- Desalination
- Hydrophobic Membranes
- Specific Thermal Energy Consumption
- Renewable Energies
- Integrated Membrane Operations

About the Journal

Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375). *Membranes* is an international, peer-reviewed open access journal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Prof. Dr. Spas D. Kolev

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank:

JCR - Q2 (Polymer Science) / CiteScore - Q1 (Chemical Engineering (miscellaneous))
