

## Special Issue

# Membranes of Polymers of Intrinsic Microporosity

### Message from the Guest Editors

In this Special Issue, emphasis will be put on membranes of already existing PIMs, their applications to membrane processes, and the stabilization of said membranes, but also on newly synthesized PIMs with the aim of membrane application. Membranes could be in the form of thick layers, integral asymmetric structures, and thin film composites. New and unconventional ideas to form PIM materials into membranes, new applications of PIM membranes, and methods to stabilize PIM membranes are searched for and are welcomed to be presented in the Special Issue.

## About the Journal

### Message from the Editor-in-Chief

You are cordially invited to contribute a research article or a comprehensive review for consideration and publication in *Membranes* (ISSN 2077-0375). *Membranes* is an international, peer-reviewed open access journal of membrane technology published monthly online by MDPI. The journal covers the broad aspects of the science and technology of both biological and non-biological membranes, including membrane dynamics and the preparation and characterization of membranes and their applications in water, environment, energy, and food industries. Articles contributing to better understanding of transport processes in all types of membranes are also welcome. The scientific community and the general public have unlimited and free access to the content as soon as it is published. We would be pleased to welcome you as one of our authors.

### Author Benefits

#### Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), Ei Compendex, PubMed, PMC, CAPlus / SciFinder, Inspec, and other databases.

#### Journal Rank:

JCR - Q2 (Polymer Science) / CiteScore - Q1 (Chemical Engineering (miscellaneous))
