submissions:

closed (28 February 2024)

Message from the Guest Editor

In the last several decades, research has been focused on the identification of new markers of cardiovascular disease in patients with diabetes. If these markers can be confirmed as true atherosclerosis risk factors (e.g., by Mendelian randomization), they might become new therapeutic targets in the prevention of cardiovascular disease in patients with diabetes. The aim of this Special Issue is to provide novel research related to biomarkers of atherosclerosis in patients with both type 2 and type 1 diabetes.

Message from the Editor-in-Chief

The metabolome is the result of the combined effects of genetic and environmental influences on metabolic processes. Metabolomic studies can provide a global view of metabolism and thereby improve our understanding of the underlying biology. Advances in metabolomic technologies have shown utility for elucidating mechanisms which underlie fundamental biological processes including disease pathology. *Metabolites* is proud to be part of the development of metabolomics and we look forward to working with many of you to publish high quality metabolomic studies.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank: JCR - Q2 (Biochemistry and Molecular Biology) / CiteScore - Q2 (Endocrinology, Diabetes and Metabolism)
